

GAP ANALYSIS REPORT

Opportunity: Azure DC Migration for Banking Core
Offering: Hybrid Cloud Migration Suite

Category	Details
Covered	Migration Landing Zone
Partial Coverage	Compliance templates
Missing	Zero downtime

Consultant Narrative

****Gap Assessment:** Core Banking Workload Migration to Azure Cloud

- ****Scope Alignment**:** The current solution effectively addresses ****Migration**** (legacy-to-cloud transition) and ****Landing Zone**** (secure, scalable Azure foundations), but lacks ****zero-downtime strategies****, critical for core banking availability. ****Compliance templates**** are partially covered but require deeper alignment with financial regulations (e.g., PCI-DSS, regional mandates).

- ****Key Risks**:**
- ****Operational Disruption**:** Absence of zero-downtime migration plans risks service outages, impacting customer transactions and regulatory reporting.
- ****Compliance Gaps**:** Incomplete templates may delay audits or necessitate rework, increasing time-to-value.
- ****Technical Debt**:** Legacy system dependencies could hinder cloud-native optimization post-migration.

- ****Recommendations**:**
- Prioritize ****zero-downtime architectures**** (e.g., blue-green deployments, Azure Site Recovery) to meet banking uptime SLAs.
- Expand ****compliance coverage**** with pre-validated Azure Policy templates for financial services and regulator collaboration.
- Conduct a ****phased migration pilot**** to validate HA (High Availability) design before full-scale rollout.

- ****Client Impact**:**
- ****Positive**:** Reduced infrastructure costs, scalability, and improved resilience via Azure Landing Zones.
- ****Mitigation Needed**:** Address gaps proactively to avoid reputational/financial risks from downtime or compliance failures. Early stakeholder engagement (IT, Legal, Risk) is critical.

***Next Steps:** Formalize a roadmap with milestones for zero-downtime testing and compliance validation.
